Hydroponics Kit

For Amature Gardening

CONTENTS:

- Hydroponics Pot with Net Bag & Plate
- Hydr'O'Feed - 100ml. bottle
- Hydr'O'Grow - 100gm. bottle
- Growing Media, Above

Metal pot stand & hanging

Coir Products, Pots & Hangings

Coir is a natural product extracted from the husk of coconut and used to make products like door mats, floor mats, brushes, mattresses, etc. Brown coir harvested from ripe coconut is used in upholstery padding, sacks and horticulture, while white coir, harvested from unripe coconut is used to make brushes, string, rope and fishing nets.

Besides these conventional uses, we have a large range of Decorative Garden Products made of coir. They are beautiful, light, durable and easy to handle while being completely environment-friendly and different from the usual clay & earthenware found in the market.

Coir Planting Pots/Baskets:

Coir pots are made of natural Coconut fibre and rubber (rubberized to hold the pot together). They are produced for use in horticultural farms, flower gardens, greenhouses, and nurseries. Coir Pots are 100% eco-friendly and transforms into organic matter on decomposing. We supply Coir Pots / Baskets in various sizes according to customer needs and requirements.

Features:

1. Pots remain stable above ground for a year and biodegrade in the soil after 2 – 3 months.
2. Pots add texture to the soil as they degrade.
3. Plants grown in these pots benefit from air pruning.
4. Plant roots will grow through the pot walls, encouraging a strong root system.
5. Absorbs water better.
6. Moderates moisture and increase microbial activity.
7. High tensile strength and lignin content.
8. Environmentally Sustainable.

Hanging Baskets

Coir hanging baskets are made from coir fibre blended with natural rubber. Coir hanging baskets are less in weight, makes them viable for internal gardening. Plants grow faster and healthily in coir baskets. We supply Coir made Hanging baskets for planting flowering plants that add décor and beauty to your home. As per the requirement of the customer, we customize our hanging baskets. These baskets are eco-friendly and lasts for long periods of time. Coir can absorb water at a rate of about seven times its dry weight, improving the water retention of your hanging basket.

Features:

1. Eco-friendly because of Coco fiber.
2. Easily bio-degradable.
3. Used for growing indoor-outdoor small plants.
4. No water leakage, excess water will drain.
5. Air porous, induces healthy root growth.
6. High water retention when used along with coco peat

Coco Poles

Coco poles are also called as Grow Pole, Plant pole, Plant climber stick. Coco poles are made by wrapping coir twin, coir fibre sheets around PVC pipes and Wood sticks. It's ideal for creepers like ornamental plants & even vegetables. Popularly it is one of the best organic growing media. Coco poles being porous, helps the plant to develop many tiny roots throughout surface. Plants grow healthily in Coco poles. We export Coco Poles throughout the globe as per customer requirements.

Features:

1. Eco-friendly from Coco fiber.
2. Easily bio-degradable.
3. Used for growing indoor-outdoor small plants.

Seeding Pots

Coir Seed Germination Cups: Eco-friendly coir cup to initiate healthier growth of plants with Fiber Grow seed cups – alternative to peat based pots .Made from the husk of coconuts (coir). Great for starting all flowers and vegetables. The Fiber Grow Seed Tray is designed for starting seeds and/or cuttings. Once the plant has matured enough (weather permitting) they can be planted directly into the ground. Once in the ground, the roots will go through the Fiber Grow pots minimize transplanting shock.

Features:

1. Eco-friendly from Coco fiber.
2. Easily bio-degradable.
3. Used for growing indoor-outdoor small plants

Spanish Cup

Spanish Cups: We are a manufacturer of an extensive range of Coco Seedling/Spanish Cups. Our seeding cups are manufactured by making use of quality raw material and are the best substitute for plastic cups. Offered products are used to grow seeds and then as a medium for replantation. Then after growing the plants can be planted without removing the cup by cutting the outer layer without damaging the roots. We have also made use of advanced manufacturing techniques in order to confirm its long life. The offered products range is made available in numerous sizes and shapes to efficiently cater to our clients.

Coco Peat Pellets and Bricks

Coir Pellets:

A great medium for starting seeds or propagating cuttings, coir is a biodegradable peat alternative made from coconut husk fibers, a renewable by-product of the coconut harvest. Used extensively in garden centers, plant nurseries and hardware stores. We supply nude pellets and non woven cloth (Gify) covered pellets as per customer requirement in different sizes.

These compressed pellets are particularly convenient because you don't need soil or pots. Just drop the pellet into warm water and it expands to several times its original, making it ready for planting immediately. When the plants have grown to size, you can drop the whole thing directly into the ground or into a planter.
